SUMMARY

Data analyst who builds the reporting layer and the tooling underneath it: tabular models in Power BI and DAX, production SQL against live operational databases, and ETL integrating disconnected source systems into one reportable model. Six years across research and finance organizations. Builds the analyst tooling the work needs when it does not already exist, in Python, C#, and SQL.

EXPERIENCE

Data Analyst II

March 2025 - Present

University of Miami, Miller School of Medicine

Miami, FL

- Built a 94-measure DAX model and 10-table tabular architecture over an ETL pipeline integrating 315,040 records from NIH grant files, facilities space inventory, and Workday HR, joined through a name-resolution layer built to reconcile source systems that share no common key, across 280 active principal investigators and \$540.6M in research funding. Flagged 68.3K of 358K assignable square feet as optimizable, 19.1% of inventory at a \$450 per square foot threshold, with departments scored into priority review segments.
- Wrote production PostgreSQL reporting for two active oncology trials in OpenClinica Insight, applying multi-CTE logic, DISTINCT ON participant deduplication, and FILTER-clause conditional aggregation for per-patient enrollment, disposition, and adverse event reports. Established a build-in-test, promote-to-production workflow that caught hidden Unicode soft hyphens embedded in status strings before they corrupted downstream filtering.
- Analyzed 3,606 room bookings across 45 spaces over 607 days in Python and R, finding that two rooms carried 36.9% and 31.0% business-hours utilization while 93% of spaces stayed under 10%, and that one department accounted for 5,653 booking hours, 7.9 times the next-highest user.
- Quantified facility continuity risk across research buildings in R, scoring cumulative vulnerability indicators from survey data and surfacing zero emergency power coverage in the Soffer Clinical Research Building across 35 critical equipment items.
- Built a KPI system in Smartsheet tracking 48 metrics across teaching, research, and operations, consolidating figures previously siloed across five units into one source feeding quarterly strategic planning reviews, board reporting, and external ranking and accreditation submissions.

Full-time graduate study and career transition, MS in Business Analytics, University of Miami (2023 to 2025)

Planning & Budget Analyst

December 2021 - March 2023

Georgetown University, Georgetown College Finance Office

Remote, USA

- Managed Georgetown College's annual budgeting cycle in Workday Adaptive Planning, overseeing \$96.7M in Compensation and \$52.7M in Non-Compensation budgets across nine departments.
- Processed 1,000+ detailed rows integrating FY23 Compensation and Non-Compensation data into Workday Adaptive Planning Detail Model and Personnel Costing Sheets.
- Conducted cost evaluations in IBM Cognos Analytics covering ADA compliance expenditures and commencement spend, producing financial reporting that informed budget planning decisions across six years of historical data (FY17-FY22).

Business Operations Specialist

June 2019 - November 2021

Georgetown University, Georgetown College Finance Office

Remote, USA

- Oversaw financial transactions for 12 departments with \$53M in total operating expenses. Benchmarked approval throughput against peer Georgetown College departments from pulled system data, measuring roughly 33% faster turnaround than the college average.
- Developed VBA macros (UserForms, event-driven workbook automation) for international Per Diem calculations in Excel and built Google Sheets trackers that reduced average honorarium payment processing to 7 business days.
- Served as Interim Business Manager for Georgetown Department of Economics during hiring moratorium, independently managing \$10.6M in operating expenses and preparing FY22 payroll and non-payroll budgets.

Project Coordinator

February 2018 - June 2019

University of Miami, Miller School of Medicine

Miami, FL

- Ran administration for a \$2.5M NIH U54 international research consortium, coordinating 18 researchers across partner institutions in Argentina and holding the program to federal grant requirements.
- Developed JavaScript-programmed PDFs automating calculations for F&A rates, total amounts due, and remaining balances, increasing invoicing efficiency by 25%.
- Ran program communication and document translation between English and Spanish, working directly with the Argentine investigators.

PROJECTS

Privacy-Safe Database Schema Extraction for LLMs
Professional Project | github.com/hihipy/sql-x-ray

May 2026 - Present

- Built a dependency-free SQL tool spanning 8 database engines (PostgreSQL, MySQL, MariaDB, SQL Server, Oracle, SQLite, BigQuery, Firebird) that extracts a full structural schema dump from system catalogs as a single multi-CTE query, with no installs or external runtime.
- Reconciled catalog dialect differences per engine, including collation conflicts and engine-specific JSON aggregation, producing consistent output on every platform: JSON for seven engines, Markdown for Firebird.
- Designed the dump as structure-only, never reading row data or default literals, making schema metadata safe to share with external LLMs under HIPAA and GDPR constraints, and validated it against a 251-table Oracle schema.

NIH Funding Data Downloader
Professional Project | github.com/hihipy/brimr-downloader

January 2026 - Present

- Built a Python GUI automating batch download of 993 NIH funding files spanning 19 fiscal years from BRIMR.org, cutting data acquisition from an estimated 8 to 10 hours to 13 minutes with zero failed downloads.
- Implemented Selenium browser automation with rule-based categorization across 150+ filename patterns into 8 organized folder categories.
- Generates a timestamped per-session log recording each file downloaded and each failure, plus an end-of-run summary of download, skip, and failure counts for reproducibility.

Power BI Tabular Model Exporter
Professional Project | github.com/hihipy/pbi-model-export

August 2025 - Present

- Developed a Tabular Editor C# script serializing complete Power BI model architecture to portable JSON including DAX measures, relationships, row-level security (RLS) roles, and partition queries.
- Applied across 2 production MSOM dashboards exporting 94 DAX measures, 10 tables, and 4 relationships into structured JSON enabling AI-assisted documentation, DAX dependency mapping, and model impact analysis.
- Reduced full model documentation from manual hours to a single automated script execution, generating LLM-ready JSON output covering 100% of model architecture including hidden objects and partition M queries.

Multi-Campus NCLEX-RN Outcomes Analysis
Personal Project | pgbd.casa/archivo/penobscot-nclex/

May 2026 - June 2026

- Built a three-table normalized SQLite database from an anonymized 7,635-attempt NCLEX-RN dataset with synthetic pass/fail outcomes over a real structural skeleton across 19 campuses, deriving 12 per-student aggregates and an empirically validated term-ordering lookup through a 24-permutation search that cut date-constraint violations from over 1,500 to 4.
- Computed first-attempt pass rates with inline 95% confidence intervals across campus, program, and cohort dimensions in pure SQL, using window functions and multi-CTE retake funnels, with explicit handling of the formula's small-sample limits.
- Fit a logistic-regression model in R (70/30 train/test split, held-out AUC near 0.63), traced the discrimination ceiling to feature availability rather than model class, and located the analytical levers at the campus and engagement level, publishing the full analysis reproducibly via Datasette Lite.

EDUCATION

Master of Science, Business Analytics, University of Miami, Coral Gables, FL, 3.70 GPA
Capstone: 2D U-Net CNN for 3D lung-CT segmentation, 0.83 average Dice coefficient across 888 scans

2024

Master of Arts, International Administration, University of Miami, Coral Gables, FL, 3.58 GPA

2016

Bachelor of Arts, History (Minor in Education), University of Miami, Coral Gables, FL, 3.38 GPA in Major

2014

CERTIFICATIONS

Data Science Certificate, Georgetown University

2023

Financial Management Certificate, eCornell

2018
