SUMMARY

Data analyst with six years in academic medicine and higher education, spanning research administration, budget analysis, and institutional reporting. Builds Power BI dashboards in DAX (Data Analysis Expressions) and ETL (extract, transform, load) pipelines, with hands-on analysis in SQL, Python, and R. Currently responsible for reporting across \$540M+ in research activity at the University of Miami Miller School of Medicine, integrating disconnected source systems into reporting for institutional leadership.

EXPERIENCE

Data Analyst II

March 2025 - Present

University of Miami, Miller School of Medicine Office of the Dean

Miami, FL

- Built the Research Dollar Density Power BI dashboard, a 94-measure DAX (Data Analysis Expressions) model over an ETL (extract, transform, load) pipeline integrating 315,040 records from National Institutes of Health (NIH) grant files, facilities space inventory, and Workday HR across 280 active principal investigators (PIs) and \$540.6M in research funding. Flagged 68.3K of 358K assignable square feet as optimizable, 19.1% of inventory at a \$450 per square foot threshold, with departments scored into priority review segments.
- Analyzed 3,606 room bookings across 45 spaces over 607 days in Python and R, finding that two rooms carried 36.9% and 31.0% business-hours utilization while 93% of spaces stayed under 10%, and that one department accounted for 5,653 booking hours, 7.9 times the next-highest user.
- Wrote production PostgreSQL reporting for two active oncology trials in OpenClinica Insight, applying multi-CTE logic, DISTINCT ON participant deduplication, and FILTER-clause conditional aggregation for per-patient enrollment, disposition, and adverse event reports. Established a build-in-test, promote-to-production workflow that caught hidden Unicode soft hyphens embedded in status strings before they corrupted downstream filtering.
- Built an institutional key performance indicator (KPI) system in Smartsheet tracking 48 metrics across Teaching, Research, and Operations, consolidating figures previously siloed across five Dean's Office units into one source feeding quarterly strategic planning reviews, board reporting, the LCME self-study, and the U.S. News Best Medical Schools survey.
- Quantified facility continuity risk across research buildings in R, scoring cumulative vulnerability indicators from survey data and surfacing zero emergency power coverage in the Soffer Clinical Research Building across 35 critical equipment items.

Planning & Budget Analyst

December 2021 - March 2023

Georgetown University, Georgetown College Finance Office

Remote, USA

- Managed Georgetown College's annual budgeting cycle in Workday Adaptive Planning, overseeing \$96.7M in Compensation and \$52.7M in Non-Compensation budgets across nine departments.
- Processed 1,000+ detailed rows integrating FY23 Compensation and Non-Compensation data into Workday Adaptive Planning Detail Model and Personnel Costing Sheets.
- Conducted cost evaluations including ADA compliance expenditures and institutional events using IBM Cognos Analytics, producing financial reporting that informed budget planning decisions for Georgetown College leadership across six years of historical data (FY17-FY22).

Business Operations Specialist

June 2019 - November 2021

Georgetown University, Georgetown College Finance Office

Remote, USA

- Oversaw financial transactions for 12 departments with \$53M in total operating expenses.
- Developed VBA macros (UserForms, event-driven workbook automation) for international Per Diem calculations in Excel and built Google Sheets trackers that reduced average honorarium payment processing to 7 business days.
- Served as Interim Business Manager for Georgetown Department of Economics during hiring moratorium, independently managing \$10.6M in operating expenses and preparing FY22 payroll and non-payroll budgets.

Project Coordinator

February 2018 - June 2019

University of Miami, Department of Microbiology and Immunology

Miami, FL

- Managed research administration for an NIH U54 International Research Consortium (\$2.5M in funding), coordinating with 18 researchers across partner institutions in Argentina.
- Developed JavaScript-programmed PDFs automating calculations for F&A rates, total amounts due, and remaining balances, increasing invoicing efficiency by 25%.
- Led bilingual stakeholder communications in English and Spanish, coordinating international travel logistics for visiting scholars and principal investigators across four countries.

PROJECTS

Privacy-Safe Database Schema Extraction for LLMs

May 2026 - Present

Professional Project | github.com/hihipy/sql-x-ray

- Built a dependency-free SQL tool spanning 8 database engines (PostgreSQL, MySQL, MariaDB, SQL Server, Oracle, SQLite, BigQuery, Firebird) that extracts a full structural schema dump from system catalogs as a single multi-CTE query, with no installs or external runtime.
- Reconciled catalog dialect differences per engine, including collation conflicts and engine-specific JSON aggregation, producing consistent output on every platform: JSON for seven engines, Markdown for Firebird.
- Designed the dump as structure-only, never reading row data or default literals, making schema metadata safe to share with external LLMs under HIPAA and GDPR constraints, and validated it against a 251-table Oracle schema.

NIH Funding Data Downloader

January 2026 - Present

Professional Project | github.com/hihipy/brimr-downloader

- Built a Python GUI automating batch download of 993 NIH funding files spanning 19 fiscal years from BRIMR.org, cutting data acquisition from an estimated 8 to 10 hours to 13 minutes with zero failed downloads.
- Implemented Selenium browser automation with rule-based categorization across 150+ filename patterns into 8 organized folder categories.
- Generates a timestamped per-session log recording each file downloaded and each failure, plus an end-of-run summary of download, skip, and failure counts for institutional reproducibility.

Power BI Tabular Model Exporter

August 2025 - Present

Professional Project | github.com/hihipy/pbi-model-export

- Developed a Tabular Editor C# script serializing complete Power BI model architecture to portable JSON including DAX measures, relationships, row-level security (RLS) roles, and partition queries.
- Applied across 2 production MSOM dashboards exporting 94 DAX measures, 10 tables, and 4 relationships into structured JSON enabling AI-assisted documentation, DAX dependency mapping, and model impact analysis.
- Reduced full model documentation from manual hours to a single automated script execution, generating LLM-ready JSON output covering 100% of model architecture including hidden objects and partition M queries.

Multi-Campus NCLEX-RN Outcomes Analysis

May 2026 - June 2026

Personal Project | pgbd.casa/archivo/penobscot-nclex/

- Built a three-table normalized SQLite database from an anonymized 7,635-attempt NCLEX-RN dataset with synthetic pass/fail outcomes over a real structural skeleton across 19 campuses, deriving 12 per-student aggregates and an empirically validated term-ordering lookup through a 24-permutation search that cut date-constraint violations from over 1,500 to 4.
- Computed first-attempt pass rates with inline 95% confidence intervals across campus, program, and cohort dimensions in pure SQL, using window functions and multi-CTE retake funnels, with explicit handling of the formula's small-sample limits.
- Fit a logistic-regression model in R (70/30 train/test split, held-out AUC near 0.63), traced the discrimination ceiling to feature availability rather than model class, and located the analytical levers at the campus and engagement level, publishing the full analysis reproducibly via Datasette Lite.

EDUCATION

- Master of Science, Business Analytics, University of Miami, Coral Gables, FL, 3.70 GPA2024
- Full-time graduate study, August 2023 - May 2024. Capstone: 2D U-Net CNN for 3D lung-CT segmentation, 0.83 average Dice coefficient across 888 scans
- Master of Arts, International Administration, University of Miami, Coral Gables, FL, 3.58 GPA2016
- Bachelor of Arts, History (Minor in Education), University of Miami, Coral Gables, FL, 3.38 GPA in Major2014

CERTIFICATIONS

- Data Science Certificate, Georgetown University, 2023
- Financial Management Certificate, eCornell, 2018

SKILLS

Programming Languages	C# Python R SQL
Data Visualization	Microsoft Power BI DAX ggplot2 Matplotlib Plotly
Databases	BigQuery MySQL Oracle PostgreSQL SQL Server SQLite
Office Automation	Excel Excel VBA Power Query (M) Power Automate
Developer Tools	Bash Docker Git Jupyter LaTeX Quarto Tabular Editor 2
Libraries	BeautifulSoup NLTK numpy pandas scikit-learn Selenium spaCy tidyverse
Software	Databricks IBM Cognos Analytics Qualtrics SharePoint Smartsheet Workday HCM Workday Adaptive Planning
Spoken Languages	English (Native) Spanish (Native) Catalan (Intermediate)
